Elica takes home three new awards, further cementing its position at the forefront of international design.

The recent innovation and creativity awards received for the Element cooker hood and the Virtus Multi DD oven further demonstrate Elica's revolutionary approach to kitchen appliances.

Elica, an innovative Italian company at the forefront of the design and manufacture of kitchen appliances, continues to stand out in its pursuit of excellence in design and innovation. This achievement is also reflected in the latest three awards received by the Fabriano-based company: the Element cooker hood and the Virtus Multi DD oven were named winners of the German Design Award in the category "Excellent Product Design - Kitchen 2025". In addition, the Element hood was also named winner of the Archiproducts Design Award for "Excellent Product Design – Kitchen 2024".

The prestigious German Design Award, presented by the German Design Council, recognises products with outstanding design innovations, fostering global competitiveness and brand value. The Archiproducts Design Awards celebrate excellence in international design: a jury identifies key trends in the global creative scene, rewarding companies and designers who have developed the most innovative solutions.

These accolades are a tangible demonstration of Elica's dedication to combining ingenuity and technology, as showcased in the two award-winning appliances. Element is a cooker hood that combines design, quiet operation, energy efficiency, and smart connectivity, allowing users to control it effortlessly via the Elica app or a voice assistant. Its versatile modular design allows it to be paired with shelves and compartments, optimising both kitchen space and aesthetics. The Virtus Multi DD oven features a sleek black glass design and a floating knob, allowing users to operate all controls and advanced cooking modes with ergonomic ease.

Elica continues its journey, shaping the kitchen of the future and redefining the cooking sector with an innovative approach - transforming each experience into something truly extraordinary.

Elica, Italian company standing at the forefront of cooking appliance production and design, a global leader in kitchen extraction systems with over 50 years of history. European major player in the production of electric motors for

household appliances and heating boilers. 2,600 staff employed in its Fabriano headquarters and in its seven production sites in Italy, Poland, Mexico and China: these are Elica's figures, successfully achieved under the constant guidance of the company President Francesco Casoli. Results driven by corporate values that have always inspired every single project, product and activity: design that meets aesthetics and performance for an extraordinary cooking experience, art destined as a model for creative processes and working methods, and innovation to support technological solutions capable of enhancing product functionality.
